New theme art kit

Fruit Picnic is a cozy, cute merge-puzzle game (like 2048). Two matching tiles slide together and become the next one, so the art tells a little story that grows from tiny to grand. Each theme is a complete makeover of the game, and this kit has everything needed to create a new one.

Your style, your ideas. The examples in this kit show what the game looks like today, not rules. Feel free to bring your own style, shapes, colours and details. The only real limits are a few technical ones on page 4.

The story

Plan **14 tiles** that grow from small and simple to big and special, so players feel a little reward each time a new one appears:

- **Small (2–16):** these show up constantly, so they should be quick to recognise.
- **Middle (32–256)** and **Big (512–1024):** rarer, more exciting things.
- **Finale (2048):** the goal of the game, the most special tile.
- **Bonus (4096–16384):** a secret “after the win” round for great players.

What to deliver: the whole theme

☐ **14 tiles** (2 to 16384)
☐ **Game screen:** background, title style, colours (page 6)
☐ **Buttons:** New game button, plus 4 round buttons with icons: sound, vibration, leaderboard, theme switch
☐ **Score boxes and board** look
☐ **Win screen:** card style, win art, headline, confetti colours (page 7)
☐ **Lose screen:** card style, lose art, headline (page 7)
☐ **Names:** theme name and a name for each tile

Files

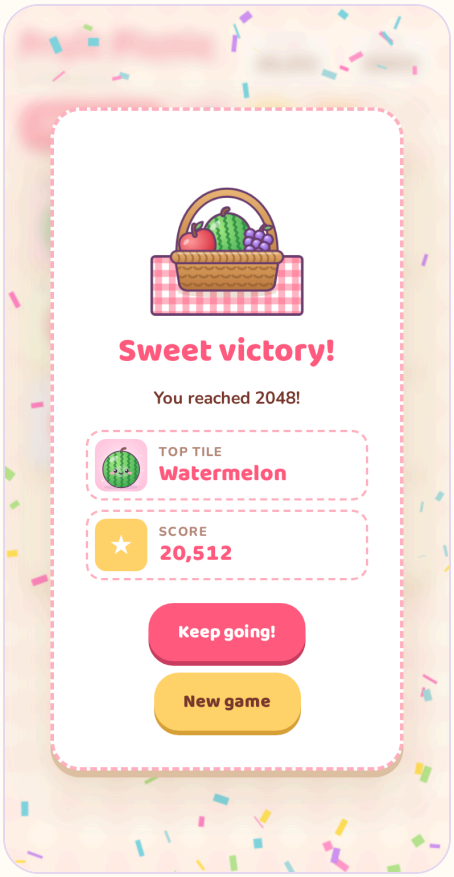

- **Tiles and art:** SVG (vector) preferred, or PNG at **1024 × 1024 px**
- **Win and lose art:** transparent background
- **Icons:** SVG, simple enough to read at about 22 px
- **Screens:** a mockup of each screen (image or Figma) with the colours listed
- Name tiles by value: `tile-0002` … `tile-16384`

Example: Fruit Picnic

The original theme: a cozy picnic blanket, a fruit ladder from cherries to watermelon, and a picnic basket on the win and lose cards.

Game screen

Win screen

Lose screen

All 14 tiles

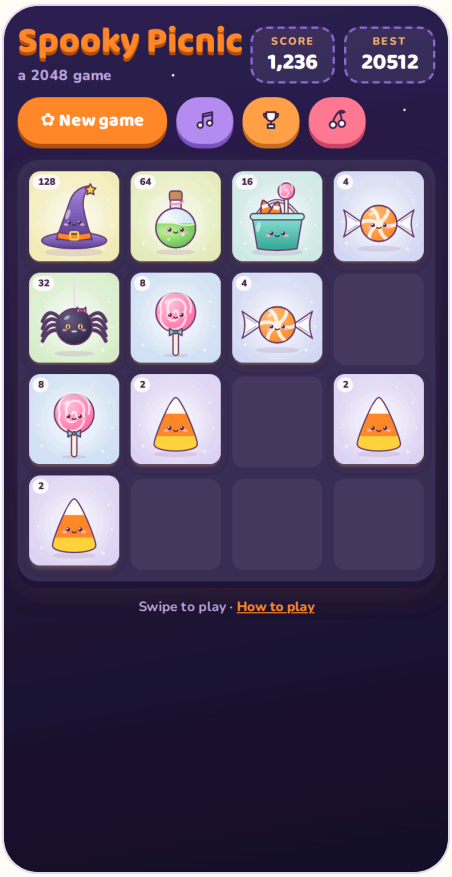

Cherries	Strawberry	Grapes	Lemon	Orange	Apple	Peach
2	4	8	16	32	64	128

Pear	Pineapple	Melon	Watermelon	Picnic basket	Fruit tart	Celebration cake
256	512	1024	2048	4096	8192	16384

Example: Spooky Picnic

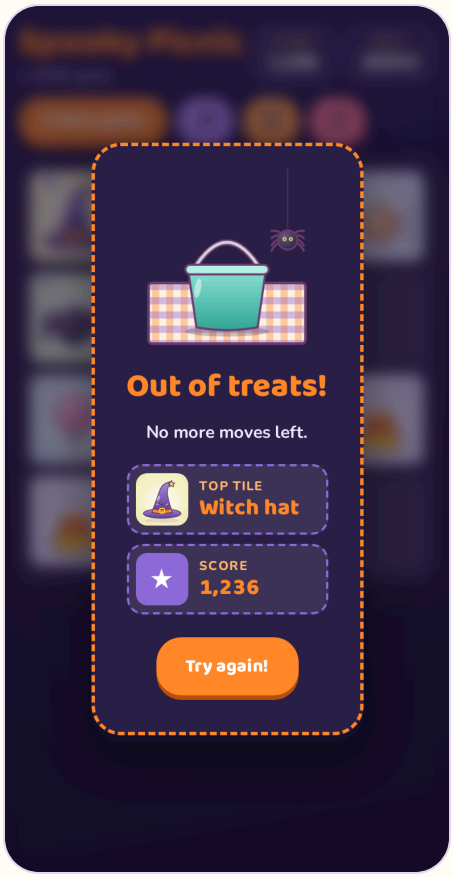

The Halloween theme: a moonlit night sky, candy and witchy tiles up to a haunted house, a candy bucket on the cards, and its own button colours.

The technical bits

These are the only must-haves, so the art works in the game:

- **Tiles are square** and fill the whole square, including their own background.
- **The game rounds the corners** a little, so keep important details away from the very corners.
- **The top-left corner** shows the tile's number in a small white badge. Keep anything important out of that spot.
- **Tiles are small on phones** (about 70–110 px). Each one should still be recognisable at that size.
- **Every tile must look different** from the others at a glance, so players can tell them apart quickly.
- **Text must stay readable:** title, scores and card text need enough contrast with what's behind them.
- **Buttons:** icons are shown at about 22 px, so keep them simple.
- **Win and lose art** is shown at about 150 × 150 px.

A full-size version of this guide is included as `tile-template.png` (for Procreate) and `tile-template.svg` (for Illustrator or Figma). The dashed area is just a helpful suggestion for where to keep key details.

Tile sheet

A place to plan the 14 tiles: sketch each one in its slot and note its name and background colour.

Game screen

Everything on the main screen can be restyled for the theme. The numbers match the parts to design:

1. **Background:** colour, pattern or scene behind everything (e.g. gingham picnic blanket, starry night).
2. **Title:** theme name, its colour and style; a small subtitle underneath.
3. **Score boxes:** Score and Best.
4. **New game button:** the main accent colour.
5. **Four round buttons:** sound, vibration, leaderboard and theme switch. Each can have its own colour, plus an icon for each. The theme switch shows a symbol of the *other* theme (Fruit Picnic shows a pumpkin, Spooky Picnic shows cherries), so this theme needs its own little symbol too.
6. **Board:** the tray the tiles sit on and the empty spaces.

Colours

Background	4 round buttons
Title	Score boxes
Accent / New game button	Board and empty spaces

Win and lose screens

The win screen appears when the player reaches 2048, and the lose screen when they run out of moves. Both show the player's top tile and score.

Win screen

Lose screen

7 **Card style:** colour, border and buttons.

8 **Win art:** the celebration picture (e.g. a full basket, a candy bucket full of sweets).

9 **Lose art:** the "empty" picture (e.g. an empty basket, an empty bucket with a spider).

10 **Headlines:** short, fun and in the theme (e.g. "Sweet victory!", "Out of treats!").

11 **Confetti:** 5–7 colours that fall behind the win card.
